

The **Live Chlorine Free (LCF) Ozone System** is an advanced, fully automated water treatment solution designed for pools and spas. This cutting-edge system significantly reduces chlorine exposure, ensuring clean, safe, vibrantly clear water with up to 100% less chlorine.

## Key Benefits

- **Reduced Chlorine Exposure:** Using ozone as the primary sanitizer reduces chlorine levels by 80-100%, destroying pathogens and eliminating harmful byproducts.
- **Proactive Dosing:** The system reads the pool's oxidation demand in real-time and microdoses chlorine and acid only when needed to maintain optimal water quality without manually adding chemicals.
- **Enhanced Water Quality:** A pool can operate with 0-0.5 parts per million chlorine, producing fresh, clean, silky-feeling water.

# REVOLUTIONIZE POOL WATER TREATMENT

Experience the future of pool water treatment with the **Live Chlorine Free (LCF) Ozone System**.

## Advanced Technology

- **Oxygen-Fed Ozone:** The LCF System generates ozone using 92-96% pure oxygen. This increases the concentration and solubility of ozone in water, making it 50% more effective than conventional systems.
- **Plasma Technology:** High ozone concentration dissolves more efficiently, ensuring maximum disinfection, and unparalleled water quality.
- **Real-Time Monitoring:** The system continuously monitors oxidation-reduction potential (ORP) and pH, displaying real-time data to ensure your water is pathogen-free with readings of 650+ and the pH is maintained within the ideal range of 7.4-7.6.

## Maintenance Simplified

- **Longevity:** The ozone generator requires service every 5-15 years compared to the annual rebuilds of conventional systems.
- **Low Service Frequency:** The oxygen concentrator requires servicing every 1-3 years, depending on usage.

**Ideal for the health-conscious pool owner who seeks the finest in pool & spa water treatment.**
